

## Milton And Crews XP-47J

Converted To CFS2 By Dvslats

This package contains Milton's and his gang Republic Xp-47J aircraft for use in CFS2.

Everything needed is included, weapons profile, weapons, textures, air file, aircraft configuration file, sound, and panel with gauges. No hunting around for errant zip files.

### Installation

Create a temporary folder on your desktop and extract the contents from this zip file to it.

With that done, just follow the folder structure for copying over to your CFS2 installation i.e. Objects dp to Cfs2 Objects dp, Aircraft to CFS2 Aircraft, Gauges to CFS2 Gauges and so on.

Add to your mdlnames in CFS2 root folder, the text from inside DB\_P47\_Weapons folder.

And that is it. Go fly!

## Important Notes

Milton's air file requires that your throttle be set to 10% to 20% for engine start up. Make sure the parking brake is set. This is in "Hard" setting. I've not tested it on the others, but if you get no start this is the fix.

The 2D panel by Milton uses an offset gun sight. The aim point for this is set in the Panel.cfg. If you fly with no panel, Hud only, your aim point will be incorrect. To fix it open the Panel.cfg with Notepad and edit the text;

```
VIEW_FORWARD_DIR=11.0, 0.0, -1.8
```

To

```
VIEW_FORWARD_DIR=0.0, 0.0, 0.0
```

You will have to choose one or the other. Another option is to use a different 2D panel with a centered gun sight from another designer/author.

Braking strength is set low for this big heavy bird. Give yourself plenty of space on the runway to come to a complete stop.

The sound file has a configuration setting used by Fs 2004. The only issue here is the interior sounds at engine start up. The sequence is off. Having no experience with this, I left it as is. All the others are fine. If anyone has the skills to correct it, please post it at sim-outhouse.

To make use of the different aircraft textures, re-name the texture folder you prefer to "Texture" and the others to anything else. i.e. Texture1 or TextureSEAC.

CFS2 does not like having them added in the aircraft.cfg, plus this will keep the aircraft count down.

## Credits

### **Original authors;**

Model Designer: Milton Shupe

Pilot Figure: Jan Visser

Exterior Textures FS9: Nigel Richards, Damian Radice

Flight Model Designer: Tom Falley

Technical Advisors: Tom Falley, Steve Bryant

Tested-Beta: Sim-Outhouse Membership

Panel, Gauges, textures: Scott Thomas, Milton Shupe, Nigel Richards, Microsoft, and other authors as noted

Sounds: Nigel Richards

**Conversion, Air file and cfg edits, damage profile, texture conversion, vc panel gauges and some other stuff;**

**Alpha Texture for Prop;**

K. Malinowski

If I missed anyone's names, please let me know and it will be corrected.

With the "J" model completed, look forward to XP-47H and XP-47 72 next.

All of the main components are done so these will be much easier. 😊

Enjoy, Dvslats
