

read me

Today, after almost half a year of construction, I present you my new airport EDJA Allgäu Airport before

Since the airport is near me and I have already flown away there, I have decided to bring the Airport EDJA up to date for the FSX as freeware so building it myself was again in order

The airport was tested by me on a different computer. Everything works perfectly. Traffic works, AI traffic, road traffic and ILS approach works.

So have fun in Memmingen at Allgäu Airport also known as Munich West and go on a journey of discovery best with a small plane or helicopter so that you can see the many details

lands at Airport EDJA with an A321 or a Boeing 737. Larger planes are not permitted, then take a helicopter or a small plane and fly over the Buxheimer Weiher to Tannheim to the flight school and explore the many details

Installation:

Put the folder EDJA Allgäu Airport in the folder FSX Addon Scenery and activate it

Steps listed below only if you don't have these addons yet! !

to be able to see people unzip the included folder 3dpeople_Lib and put the unpacked folder in your FSX addon scenery and activate it

o be able to see trains (only static) unpack the folder PKP and put the folder in your FSX addon scenery and activate it

to see more vehicles and parking spaces unzip the folder objilib-large-car-parkingfsx and put the folder in your FSX addon scenery and activate it

Support:

If you have any problems or questions, please email jam_aika@hotmail.de

Now have fun and good luck on your LG Jamaica flight
