Cozumel to Mexico City

(MMCZ to MMMX)

This mission will have you taxi to MMCZ departing on runway 29. As shown below.

You will be flying medical supplies. Wait until the ambulance brings them out to you and then begin your taxi.

GPS Tutorial

As you wait for the supplies this is a good time for a refresher on some basic navigation in the King Air. First set your GPS as shown in the following pictures. Circled in red is the waypoint button on your GPS that can be brought up with a Shift - 3 command.

The button circled in red on this third screen will bring up the third screen when clicked with your mouse. At the point of the third screen you can type in MMMX for Mexico City. Then you click the ENT button on your GPS until your flight plan is shown on the GPS.

Pick up the next way point which is the hold short point on the departing runway. Then fly on to Mexico City which is just less then 700 miles away. You can use rate (time compression) for this mission. At 16x and 300 knots this mission should not take long to fly.

Usually Mexico City is clouded in. For this reason it would be best to do an ILS landing. If you chose not to however. No one will know but you in this mission. That might not work for a virtual airline but in this scenario we try to match your skill level.

Just a helpful hint. Before you start this mission, be sure you have your throttle cut to zero percent. This is a good hint before starting any flight as well.
